primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with ECOR I adaptor, digested with NotI and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CAGCCACCAC. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Drestlopping Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

/Longe "Vector: pCMV-Sport6; Site 1: NotI; Site 2: SalI; This is a long-transcript enriched cDNA library (Genome Res. 11: 153-1558 (2001). [PMID: 1154199] From WA01 cell line. Undifferentiated human BS cell line WA01/H1 was obtained from Wicell Research Institute, Inc., Madison, Wi, cultured according to their instructions, on MEF feeders. They formed round colonies with defined edges and were positive for alkaline phosphatase, SSEA-1, OCT4, MEXI, UTF, TERT, SOX2, CX43 and CX45. They are negative for GATA2, GATA4 DX1. NCAM, WSX1, FLT3, SSEA-1, TUBB3, NES, GFAP, and EOMES. When confluent (18-10 days after plating), the ES cells from 4 X 6cm dishes were treated with 1 mg/ml collagenase, type IV (Invitrogen/GIBCO) for 5-10 min and gently scraped off with 5 ml pipette. RNA was purified with TRIZOl Reagent from Invitrogen. Protocol ref. Genome Res. 11: 153-1558 (2001). [PMID:11544199]) Double-stranded cDNAs were synthesized with an Oligo ddT) primer [Invitrogen: Synthesized with an Oligo ddT) primer [Invitrogen: Synthesized with an Oligo ddT) primer [Invitrogen: Gone-linker Li-Sal4, purified by phenol/chloroform extraction, and separated from free linkers by centricon-100 column. Then, the cDNAs were amplified by column. Then, the cDNAs were amplified by were purified by phenol/chloroform extraction and Centricon-100 column. The cDNAs were adgested with SalI and NotI enzymes and cloned into Sall/NotI site of pcMV-SPORTS plasmid vector. The average insert size is about 3.6kb."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       371

"Identification of novel transcribed sequences on human chromosome 22
"Identification of novel transcribed sequences on human chromosome 22
"I bun Rese B.1-9(2001).

- 1- FUNCTION: Catalyzes specifically the phosphorylation of ceramide to form ceramide 1-phosphate. Acts efficiently on natural and analog ceramide 1-phosphate. Acts efficiently on natural and analog ceramides (G6, C8, C16 ceramides, and C8-dihydroceramide), to a lesser extent on C2-ceramide and C6-dihydroceramide, but not on other lipids, such as various sphingosines.

- CATALYTIC ACTIVITY: ATP + ceramide = ADP + ceramide 1-phosphate.
- COPACTOR: Calcium and magnesium.
- COPACTOR: Calcium and magnesium.
- SIBJELLULAR LOCATION: Cytoplasmic and membrane-associated.
- SIBJELLULAR LOCATION: Cytoplasmic and membrane-associated.
- I SUBCELLANBOUS: Optimal pH is 6.0-7.5.
- MISCELLANBOUS: Optimal pH is 6.0-7.5.
- SIMILARITY: Contains 1 DAGK domain.
- CAUTION: Ref.3 sequence differs from that shown due to erroneous gene model prediction. An additional exon may exist between amino acid positions 168 and 169.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EMBL; AJ457828; CAD29884.1; -..

                                                                                 --- FUNCTION: Catalyzes specifically the phosphorylation of ceramide to form ceramide 1-phosphate. Acts efficiently on natural and analog ceramides (G6, C8, C16 ceramides, and C8-dhydroceramide), to a lesser extent on C2-ceramide and C6-dhydroceramide, but not on other lipids, such as various sphingosines (By similarity).
--- COFACTIVITY: ATP + ceramide = ADP + ceramide 1-phosphate.
--- COFACTION: C3Loium and magnesium (By similarity).
--- SUBCELLULAR LOCATION: Cytoplasmic and membrane-associated (By
                                                                                                                                                                                                                                                                                                                               similarity).
-!- TISSUE SPECIFICITY: High level expression in heart, brain and testis; low expression in spleen, liver and lung; not detected in skeletal muscle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GSTDCVCYSTVGTNDAETSALHIIIGDSLAIDVSSVHYHNTLLRYSVSLLGYGFYGDLIK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DSEKKRWMGLVRYDFSGLKTFLSHQYYEGTLSFLPAQHTVGSPRDNKPCRAGCFVCRQSK

E-mail enquiries: c22g@sanger.ac.uk Manuscript Sanger Institute name: pGEM bK29FT1.1
Homo sapiens cDNA sequence. This sequence was generated as part of The Wellcome Trust Sanger Institute program to isolate cDNA clones representing the full length open reading frame of well annotated protein coding genes on human chromosome 22. For more information see http://www.sanger.ac.uk/HGP/Chr22/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CR456404.1 GI:47678338
